CSS Keyframe Animation

Storyboard and create a **set of CSS animations** using **keyframes**, to animate content inside a banner-style container. The total runtime of the animation should be **5-10 seconds**. You can utilize **images and** text in your animation. Use **delays** and proper **timing** to stagger the animations so they run in a planned sequence and not all at once.

This project will be graded as a standalone homework and not as part of the FIP, but if you wish to plan and build an animation for your FIP site, you are encouraged to do so!

Due: March 29th, 2024, 11:59 PM, ZIP File in FOL Dropbox.
